

Smart Board 8084i

Smart Board 8084i Interactive Displays are selling on eBay for \$7500 to \$8550 USD.

84" boards are very rare now. Most boards are 70". It is approximately 6 ft 5" tall.

TBC's board however has only has 1 working HDMI input and is out of warranty. If it breaks down, we are not sure how much it will cost to replace.

The screen itself is in a holder that is on wheels and costs about \$1,500 to \$1,800 CAD.

You will need to add a computer if you would like to use internet or other software to project on the Smartboard. The computer is stored in the panel in the bottom middle of the rack. It comes with factory white board settings and 2 pens.
